

Fuse Quarterly Research Meeting

Community Pharmacy and Public Health: the perfect match?

Room 2.21, Research Beehive, Newcastle University

Wednesday 18 October, 9.30am – 1pm

Overview

This event will bring together practice partners, policy-makers, commissioners, and academics to explore the role of community pharmacy in delivering public health services. The meeting will provide an overview of the current interventions, give examples of best practice, debate the effectiveness and acceptability of using community pharmacies as a way of delivering services, and look at opportunities for the development of future services.

Structure

The format of the event will be a series of presentations from practice partners and academics: three short presentations will provide an overview of current practice, while two presentations will showcase recent NIHR-funded trials, using community pharmacy as a setting to deliver public health services. There will be an opportunity for delegates to debate the use of community pharmacy as a way of delivering public health services, and to put questions to the speakers in a panel discussion.
